

## **INI to Profile PowerFlex75 System at Marine Aftermarket Accessories Trade Show (MAATS) 2008 in Las Vegas, NV – July 16-18<sup>th</sup>**

**Morrisville, NC:** INI Power Systems, Inc. is exhibiting at the 2008 MAATS trade show in Las Vegas, NV and will profile its PowerFlex75 System to the marine/boating aftermarket accessories industry.

**Booth Location:** 822

### **Company Information**

INI is developing, manufacturing and licensing clean portable power components and systems to a wide variety of markets to augment or replace batteries and generators. INI uses methanol – a high energy density and logistically friendly liquid fuel – in a patented microfluidic system to generate power. INI's PowerFlex75 product line is ideally suited for Consumer Electronic, Industrial, and Safety and Security markets. INI will formally launch the PowerFlex75 system in 3Q 2008 targeting industrial, recreation, safety, security customers and is uniquely designed to provide mobility, reduced weight, noise and emissions, and longer run-time as compared to lead acid batteries and gas or diesel generators. With flexible power and voltage output, including the ability to link systems together, customers enjoy over 40 hours of continuous operation on just 1 gallon of methanol. The PowerFlex75 is ideal as a battery recharger or direct power supply for a variety of on-board power needs.
